1 Simulation

Install `ghdl` to easily simulate modules that come with a testbench:

```
git clone https://github.com/ghdl/ghdl
cd ghdl
./configure
make
sudo make install
```

Once this is done, you can safely simulate a module that comes with a testbench by using *make* in its `sim` folder. For example:

```
cd $git/ip/adau1761/sim
make
```
